### **tc-europa.com Launches Russian Translation Service**

*The new Russian translation service will help small and medium software development companies to get their digital products, website and documentation localized to Russian to increase their marketing potential.*

KRASNOYARSK, RUSSIA, February 15, 2009 **/24-7PressRelease/** -- Technical Communication Europa is launching a new Russian translation / localization service starting from February 14. The new service is aimed at software development companies, who want to bring their digital products and services to a big, promising market of Russia and new independent states, such as Ukraine, Belarus and Kazakhstan.

The company translates from English into Russian using native translators with a PhD degree in Philology and a solid experience in the shareware business. A native translator that comes from the Russian culture is the best choice to ensure that the localized website or documentation will read well in Russian and won't cause any resentment or be rejected due to errors or non-native style.

The company offers the following Russian translation services:

- Translation of websites
- Translation of software interfaces
- Translation of manuals and user guides
- Translation of press-releases
- Translation of white papers, case-studies
- Translation of PAD descriptions
- Translation of letters

In addition to translation to Russian, the specialists at tc-europa.com can edit and proofread documents for cultural adaptation, spelling and grammar accuracy.

More information is available at <http://www.tc-europa.com>

Technical Communication - Europa (tc-europa.com) was founded in 2008 as a business communication service that offers marketing writing and translation to shareware developers in Russia. For more information, please visit the company's website: [www.tc-europa.com](http://www.tc-europa.com).
