### Artensoft Photo Mosaic Wizard Enables Rapid Creation of True Photo Mosaics

A new software tool relies on the unique mosaic building algorithm to create a clear and natural looking mosaic pictures, without superimposing, cell colorization or other cheats

**August 31, 2010** – Artensoft today introduces Artensoft Photo Mosaic Wizard 1.0, a unique software tool specifically designed to let anyone create a mosaic picture from hundreds of smaller tile images. The new software incorporates Artensoft’s breakthrough technology which automatically arranges all elements of a photo mosaic by color, shape and orientation in exact accordance with an original picture.

Artensoft Photo Mosaic Wizard is built on the advanced mosaic building algorithm that allows the user to create a clear and natural mosaic. Unlike most other photo mosaic tools that place tile images into a grid with equal-sized cells and use superimposing or cell colorization, the Artensoft software carefully analyses an original picture for shapes and colors, selects a matching photo for each location and sets its orientation for the best look. Because distribution and orientation of tile images look chaotic, the resulting mosaic is very clear and realistic.

The program offers a simple wizard-driven interface that allows the beginner to create the first photo mosaic project in a few minutes, without opening a manual. Following the instructions of the wizard, the user first selects a photo to be used as a template for a photo mosaic, adds folders with photos, and then clicks the “Create Photo Mosaic” button. A photo mosaic is generated automatically and displayed on the screen. If necessary, the user can move, resize or replace individual tiles to fine-tune a mosaic picture before saving it to file.

Artensoft Photo Mosaic Wizard is perfect for anyone who wants to make a personalized photo gift that will impress people for years to come. For example, the user can surprise his wife on the wedding anniversary with her mosaic portrait made up of photos with various flowers. The program will also benefit professional users such as advertisers and designers who can create stunning ads, posters and banners designed as a mosaic.
